

Installation Guide

1. Minimum Requirements

- Linux/macOS
- Intel Core 2 Duo Processor
- 2GB RAM
- 200 GB Disk Space

2. Installation

NOTE: If you have previously installed VerySnazzyAddressBook, you must run the uninstall script (section 3 of this document) before re-installing

1. Download the compressed application file
2. Move the compressed application file to where you'd like to install the application; replacing "some/path/" with the desired installation path
> mv TeamA.tgz some/path/
3. Navigate to the directory containing the compressed application file; replacing "some/path/" with the path to the directory containing the TeamA.tgz file
> cd some/path/
4. Decompress the file using tar
> tar -xvzf TeamA.tgz
5. Navigate into the application directory
> cd project1/
6. Run the installation script; when prompted for a password, enter your unix password
> ./Install.sh
7. Run the application by running the "AddressBook" executable; this can be done graphically through a file browser or through the command line
> ./AddressBook

3. Uninstalling

1. Navigate to the application directory; replacing "some/path/" with the path of the installation directory
> cd some/path/
2. Run the uninstall script; if prompted to confirm deletion of the AddressBook executable, type "y" then hit enter
> ./Uninstall.sh
